

The Spaghetti Phase Is a Real Phase

What happens when you give every employee Claude Code — and how to shorten the chaos in the middle.

01

Creative Explosion

Every engineer, AE, and ops person ships something in week one. Internal tools, scrapers, agents, dashboards. Energy is real.

02

Bowl Of Spaghetti

Forty half-finished tools. No shared patterns.
Three people built the same lead scorer. Nobody
can say what's in production.

03

Forced Consolidation

Someone draws a map. Tools get retired, merged, or promoted. A platform team emerges. The leverage starts compounding.

Four Levers That Compress Phase Two

-
- 01 Weekly internal demo day — surface duplicates fast
 - 02 One shared repo of approved patterns and prompts
 - 03 Name one engineer as the platform editor
 - 04 Kill anything no human has opened in 30 days
-

You Cannot Skip It. You Can Only Shorten It.

Spaghetti is the cost of giving real builders real tools. The companies that win compress the middle on purpose.
