

The 5-step Product Hunt agent

One scheduled task. Runs at 3:58 AM. Hands me a qualified, enriched outreach list before I'm awake.

01

Scrape yesterday's launches

Pulls every Product Hunt launch from the prior 24 hours. Raw feed in, structured rows out.

02

Qualify for B2B fit

Filter against a B2B rubric. Consumer launches drop. Only fits move forward — I don't want the rest.

03

Extract 4 launch insights

Per company: what they shipped, who it's for, the angle, the tie-in. Lands in dynamic fields for personalization.

04

Push to Ample Market list

Enriched contacts land in a named list inside the engagement platform. CRM context already attached.

Hand off to the outreach agent

Sequences are queued, not sent. I approve or reject in the morning. The agent does the rest.
