

PRICING & PACKAGING

Customers Hate Usage Pricing. Here's How To Fix It.

CFOs don't fear usage-based pricing because it's expensive. They fear it because it's unpredictable. Bill shock kills renewals.

FIX 01

Base Fee + Usage On Top

Anchor the contract with a recurring floor. Layer usage above it. CFOs can forecast the floor and only sweat the variable layer.

FIX 02

Real-Time Consumption Visibility

Buyers should never wait for an invoice to know what they spent. Show usage live, by team, by user, by unit.

FIX 03

IT-Level Controls Per Team

Caps, alerts, and team-level budgets. Give IT the same governance posture they expect from any cloud spend tool.

FIX 04

Audit-Grade Traceability

Every consumption unit tied to a user, prompt, agent run, or workflow. When finance asks 'what drove this spike?' the answer is one click away.

THE TAKEAWAY

Predictability Sells. Surprises Don't.

Usage pricing isn't the problem. The lack of a floor, visibility, controls, and traceability is. Ship those four and renewals stop being a fight.
